PROFESSIONAL SUMMARY

Cloud and Cloud Security engineer focused on AWS infrastructure, IAM security, observability, Infrastructure as Code, and cloud-native deployments. Experienced with AWS services, Terraform, Docker, Kubernetes, GitHub Actions, and CloudWatch. Built production-style cloud security and automation projects involving IAM analysis, threat detection, infrastructure monitoring, and secure CI/CD workflows.

TECHNICAL SKILLS

Cloud Platforms: AWS EC2, IAM, S3, CloudTrail, CloudWatch, Kubernetes, Docker

Infrastructure & Automation: Terraform, GitHub Actions, CI/CD, Linux, Bash, Infrastructure as Code (IaC), GitOps

Cloud Security: IAM Governance, Least Privilege Access, RBAC, Vulnerability Scanning, Container Security, Security Monitoring

Monitoring & Logging: CloudWatch Logs, Prometheus, Grafana, Alertmanager, Structured Logging

Programming: Python, FastAPI, REST APIs, Pandas, NumPy

EXPERIENCE

Al-Nafi International College

DevOps & AI Operations Intern (Remote)

May 2024 – May 2025

Karachi, Pakistan

- Worked with containerized cloud-native environments using Docker, Podman, and Kubernetes
- Developed Python automation scripts to streamline operational and infrastructure management workflows
- Implemented monitoring and logging workflows to improve observability and cloud infrastructure troubleshooting
- Applied networking and cloud security concepts including secure file transfer, firewall configuration, and intrusion detection systems
- Worked with Linux systems administration and infrastructure automation in production-style lab environments

PROJECTS

AI-Powered Cloud Security & IAM Analyzer | AWS, Terraform, Python, Cloud Security

- Built a cloud security analysis platform to detect IAM and S3 misconfigurations across AWS environments
- Developed IAM risk detection workflows identifying wildcard access, privilege escalation paths, and over-permissive policies
- Implemented CloudTrail-driven least privilege analysis to derive minimal IAM permissions from API usage logs
- Integrated automated Terraform remediation generation for secure infrastructure corrections
- Implemented IAM policy validation and access simulation using AWS APIs before deployment [GitHub Repo](#)

Cloud-Native DevSecOps CI/CD Pipeline | AWS EC2, Docker, GitHub Actions, CloudWatch

- Designed and deployed automated CI/CD pipelines for containerized applications on AWS EC2
- Integrated CodeQL and Trivy scanning for vulnerability detection during build and deployment stages
- Implemented centralized observability using CloudWatch Logs, metric filters, dashboards, and alarms
- Built secure Docker deployment workflows using non-root execution and hardened runtime configurations [GitHub Repo](#)

AI-Powered Threat Detection & Log Intelligence System | Python, FastAPI, Docker, Scikit-learn

- Developed an AI-driven security log analysis platform to detect brute-force and credential stuffing attacks
- Implemented hybrid anomaly detection using Isolation Forest and rule-based detection logic
- Integrated MITRE ATT&CK mapping for standardized threat classification and security event analysis
- Containerized the platform using Docker for scalable deployment across environments [GitHub Repo](#)

EDUCATION

Al-Nafi International College

EduQual RQF Level 6 - Bachelor's (Hons), Artificial Intelligence Operations

Beacon Light Academy

Edexcel A-Levels in Information Technology

May 2024 – Dec 2025

Karachi, Pakistan

Aug 2020 – Jun 2022

Karachi, Pakistan
